

## Nora's Bagel Bin Database Blueprints

#### **Second Normal Form (2NF)**

BAGEL ORDER			BAGEL O	RDER LINE ITEM		BAGE	L
PK	Bagel Order ID	L	PK / FK	Bagel Order ID		PK	Bagel ID
	Order Date	1:M	PK / FK	Bagel ID	M:1		Bagel Name
	First Name	T		Bagel Quantity			Bagel Description
	Last Name						Bagel Price
	Address 1					-	
	Address 2						
	City						
	State						
	Zip						
	Mobile Phone						
	Delivery Fee	]					
	Special Notes	]					

Explanation: The original table was in 1NF. In order to transform the table into 2NF, the attributes were distributed so that those with only partial dependencies were placed in a separate table. Each table now has a unique primary key without partial dependencies.

The Bagel Order can refer to multiple Line Items, but each line item refers to at most 1 Bagel Order. Each Bagel can be included in many different Line Items, but each line item refers to 1 bagel.

## Nora's Bagel Bin Database Blueprints

#### Third Normal Form (3NF)

Bagel Order			BAGEL OF	RDER LINE ITEM		BAGEL	
PK	Bagel Order ID		PK / FK	Bagel Order ID	L	PK	Bagel ID
FK	Customer Number	1:M	PK / FK	Bagel ID	M:1	<u> </u>	Bagel Name
	Order Date			Bagel Quantity			Bagel Description
	Delivery Fee				_		Bagel Price
	Special Notes					-	•
	M:1	1					
Customer							
PK	Customer Number						
	First Name						
	Last Name						
	City						
	State						
	Zip						
	Address 1						
	Address 2						
	Mobile Phone						

Explanation: In order to transform the table from 2NF to 3NF, the attributes were placed in new tables so that there were no transitive dependencies as well as no repeating data. Any transitive dependencies were moved to a new table.

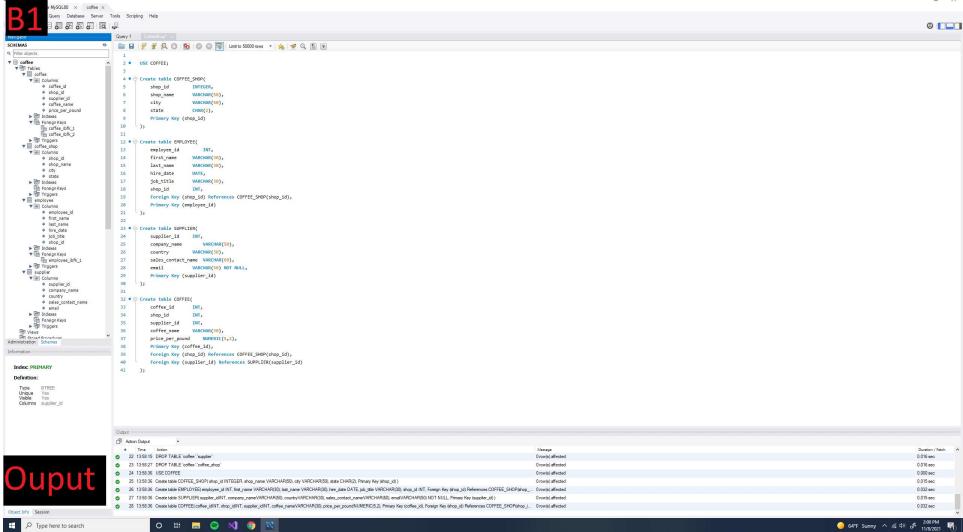

The Bagel Order can refer to multiple Line Items, but each line item refers to at most 1 Bagel Order. Each Bagel can be included in many different Line Items, but each line item refers to 1 bagel. Each customer can have multiple orders, but each order can have at most one customer.
